HIGH EFFICIENCY HEAD FOR FAST MELTING PROBES

Ref-Nr: TA-#2027

HINTERGRUND

PROBLEMSTELLUNG

For the autonomous exploration of glaciers, polar ice shields or icy moons, thermal drills /melting probes need a minimum handling by human operators and the logistic overhead is significantly lower in comparison to mechanical drills. To minimize the mission length and risks, a high penetration speed (several meters per hour) is crucial. In order to maximize the speed, the available energy must be used efficiently.

The efficiency of melting probes is defined by the amount of energy used related to the volume of ice that is molten in direction of movement. In common melting probes, a high amount of energy is not contributing to the forward movement, due to thermal flow into the surrounding ice and convection in the liquid water. This finally results in widening of the molten channel without contributing to the velocity.

LÖSUNG

The innovative geometry of our melting head is designed for optimal melting in direction of movement. The partly inverted parabolic shape offers a larger contact area to the ice than flat melting heads. At the same time, it homogenizes the projected thermal flux to the front. This way, less energy is lost to the surrounding and the head stays in contact with the ice preventing water convection.

ENTWICKLUNGSSTAND

Prototyp

CATEGORIES

//Geowissenschaften //Maschinenbau //Verfahrenstechnik
**VORTEILE**

- Highly efficient
- Less mass than parabolic shape
- No central heat accumulation

**ANWENDUNGSBEREICHE**

glacier exploration (terrestrial icy moons), in ice navigation

**SERVICE**

- Patent application at the German Patent and Trade Mark Office. The patent application pending is not yet published in the Patent Gazette. Only after the first publication of the patent application, the applicant can derive rights
therefrom and can especially claim compensation from third parties.

- Ongoing research and Prototype

RWTH Aachen University is looking for partners for patent exploitation and for research partners for joint development and contract research.
